

GUMMYCHUMS

Shopify E-Commerce Store Implementation Master Plan

From Zero to Production-Ready Launch

Developer: Mehal Srivastava

Client Target Country: India

Date: June 2026

1. Executive Summary & Brand Direction

GummyChums is an upcoming premium wellness and nutritional gummy brand for the Indian market. Unlike traditional supplement brands that rely on dry, clinical packaging and generic communication, GummyChums sits at the direct intersection of **Science and Playful Dopamine**. The project is structured under the philosophy of '*Liquid Death meets Magic Spoon meets Olipop*'—delivering real health benefits through a viral, collectibles-oriented Neo-Brutalist digital storefront.

Brand Vision & Positioning

- **The Persona:** Smart, internet-native, friendly, confident, and slightly cheeky. It avoids excessive, cringey slang but maintains a high-energy 'smile, don't clown' character.
- **The Visual Identity:** High contrast, thick Plum outlines (`#261236`), solid block shadows, subtle grid patterns, and bright candy-colored highlights. The interface must feel tactile, responsive, and alive.
- **The Customer Journey:** Land on site ('I want these') → Read science section ('I trust these') → Read reviews ('Others like me use these') → Interactive checkout ('Excited').

2. Project Timeline & Milestones Overview

Phase	Target Duration	Key Outcomes
1. Brand & Copy Finalization	Days 1 - 5	Permanent logo, brand colors, copy, and visual assets.
2. Shopify Store Admin Setup	Days 6 - 8	Partners Sandbox account, product catalogs, and shipping configuration.
3. Theme Dev (Liquid + Tailwind)	Days 9 - 18	A custom, responsive, high-performance Neo-Brutalist layout.
4. Payments & Logistics Setup	Days 19 - 21	Razorpay/UPI integration, Shiprocket setup, legal compliance pages.
5. Google Ads & Tracking Setup	Days 22 - 24	GTM, GA4, Search Console, Google Ads campaign structures.
6. Quality Assurance & Testing	Days 25 - 26	Mock checkout verification, mobile layouts, and speed optimization.
7. Transfer & Launch Execution	Days 27 - 28	Ownership transfer, Shopify plan selection, domain mapping, live go.

Phase 1: Brand Alignment & Copywriting (Days 1 - 5)

Since the current design system, logo, and colors are temporary, Phase 1 focuses entirely on aligning with the client on the permanent visual identity and writing compelling copy.

Developer Actions:

- Retrieve final client logo files (SVGs) and primary/secondary/accent color hex codes.
- Draft high-quality benefit-led copywriting for the initial product lines: *Dreamy Sleep* (melatonin/botanicals), *Laser Focus* (brahmi/ashwagandha), and *Daily Glow* (multivitamin).
- Establish product copy guidelines: witty and informational, maintaining scientific transparency to establish trust.

Phase 2: Shopify Account Setup & Store Configuration (Days 6 - 8)

Setting up the store shell and catalog structure inside Shopify.

Developer Actions:

- Create a free developer sandbox store via the **Shopify Partners Dashboard**. This allows unlimited design testing before transferring ownership to the client.
- Configure the catalog: Add main products (Dreamy Sleep, Electric Blue, Neon Violet) with prices, imagery, descriptions, weight measurements, and SKU variables.
- Set up state-wise GST tax profiles and shipping rules.

3. Technical Theme & Operations Blueprint

Phase 3: Front-End Custom Theme Development (Days 9 - 18)

We bypass restrictive drag-and-drop page builders to write a custom, high-speed Shopify Liquid theme. Tailwind CSS is integrated directly into our local environment using Shopify CLI to watch and compile styles.

Developer Actions:

- Set up local development folder using **Shopify CLI**. Link the CLI to the partner developer store.
- Configure `package.json` and `tailwind.config.js` to compile CSS directly into `assets/application.css` on changes.
- Implement the master grid layout (`theme.liquid`) and structural templates (`index.liquid`, `product.liquid`, `cart.liquid`).
- Code dynamic, customizable homepage sections: Header Navbar, Hero banner with text ribbon marquee, Problems Grid, Collectible Card display, Quiz CTA block, Testimonial Columns, Bundle packages, and Footer.
- Integrate custom Neo-Brutalist stylesheets (`.neo-shadow`, `.jelly-pop`, `.tilt-left` classes) and responsive breakpoints.

Phase 4: Integrations, Operations & Legal (Days 19 - 21)

Making the store operationally functional for the Indian market.

Developer Actions:

- **Payment Gateway:** Register and connect **Razorpay** or **PayU**. Configure UPI (GPay, PhonePe, Paytm), Netbanking, Debit/Credit cards, and configure a reliable Cash on Delivery (COD) payment option.
- **Logistics:** Set up an aggregator shipping app like **Shiprocket** or **Delhivery** inside Shopify. Configure weight-based shipping rates (e.g., Free shipping above Rs. 999; flat rate of Rs. 60 below).
- **Compliance Pages:** Create Shopify page resources for: Privacy Policy, Shipping Policy, Terms of Service, and Refund/Cancellation Policy.

Phase 5: Tracking & Google Ads Setup (Days 22 - 24)

Deploying tracking mechanisms and building the initial Google Ads marketing engine.

Developer Actions:

- Deploy **Google Tag Manager (GTM)** globally in `theme.liquid`. Connect a **Google Analytics 4 (GA4)** tag for tracking traffic metrics, bounce rates, and cart additions.
- Integrate **Google Search Console** and submit the dynamic Shopify sitemap (`/sitemap.xml`) to trigger indexing.
- **Google Ads Setup:** Configure the client's Google Ads account. Set up conversion tracking tags (page views, checkout start, purchase completion events) to optimize campaign performance.
- Perform initial keyword research targeting transactional intent (e.g., 'best sleep gummies India') and draft copy for search ads.

Phase 6: Quality Assurance & Testing (Days 25 - 26)

Verification of the storefront to guarantee a high-converting, bug-free experience.

Developer Actions:

- **Functional Testing:** Verify the full customer journey on both Safari and Chrome across iOS and Android device screen sizes. Ensure buttons click correctly and cart count updates immediately.
- **Payment Verification:** Perform mock checkouts using Razorpay test credentials. Verify COD workflows and order email triggers.
- **Performance Testing:** Compress all raster assets and icons. Compile the final optimized, minified Tailwind stylesheet for maximum page speed.

Phase 7: Store Transfer & Live Launch (Days 27 - 28)

The transfer of ownership and the public launch.

Developer Actions:

- Request the client to choose a paid Shopify subscription plan and add their billing credit card.
- Transfer ownership of the Shopify store from our Partners sandbox to the client.
- Connect the client's custom domain (updating DNS records in GoDaddy/Namecheap).
- Perform one final live payment test to ensure the production environment is fully active.

4. Contractual Alignment & Deliverables

To ensure transparency between Mehal Srivastava and the client, the scope of work is defined strictly based on the agreed website proposal:

Included Deliverables (Rs. 20,000 One-Time)	Out of Scope (Client Expense)
• Full Shopify configuration & checkout setup • Homepage custom Neo-Brutalist design • Product Detail Pages & Collection pages • Razorpay / UPI / COD integrations • Mobile-responsive UI optimization • Basic SEO (Meta Title/Desc setup) • Google Search Console & Sitemap setup • Google Analytics (GA4) integration • Delivery testing & live launch support	• Shopify monthly subscription fees • Domain purchase and annual renewals • Paid Shopify apps subscription costs • Google Ads daily budget spend • Professional product photography • Writing long-form marketing content • Future feature expansions not agreed upon

Optional Google Ads Services (Rs. 2,500/- One-Time)

- **Initial Setup (Rs. 2,500/-):** Includes keyword research, campaign creation, ad copy creation, conversion tracking setup, Google Analytics integration, and Search campaign setup.
- *Note: Ad spend is paid directly by the client to Google and is separate from service fees.*

Post-Launch Support & Enhancement Retainer

After the store goes live, any future updates, landing pages, or marketing optimizations will be billed hourly at **Rs. 750/hour**, based on actual work requested and pre-approved by the client:

- **Small Update** (e.g., price modifications, banner changes): ~1 hour (Rs. 750)
- **New Landing Page** (e.g., custom campaign page): 3–4 hours (Rs. 2,000 - Rs. 3,000)
- **New Complex Feature** (e.g., subscription app setup): 15–20 hours (Rs. 11,000 - Rs. 15,000)

DEVELOPER PLEDGE: As the sole developer on this project, I treat this GummyChums launch as a flagship release. Every line of Liquid template code, Tailwind stylesheet utility, and Google Ads tag will be meticulously written and verified for pixel-perfection and top-tier performance before launch.
